

Department of Information Technology
Academic Year 2025 - 2026 (Odd Semester)

Semester, Degree & Branch: V Semester, B.Tech. IT

Course Code & Title: CCS370 & UI and UX design

Name of the Faculty member (s): Mrs. G.Sivasathiya, AP/IT

Innovative Practice Description

• **Unit / Topic:** Unit III / Tools and Method used for Research

• **Course Outcome:** CO3

• **Topic Learning Outcome:** TLO10

• **Activity Chosen:** Flipped Classroom

• **Justification:**

UI and UX considerations are an integral part of modern digital products, influencing user feelings about technology usage. Research methods are critically responsible for unearthing such insights, and guiding designers in crafting effortless, cohesive, and enjoyable engagement moments between user and product. In Flipped Classroom activity a student explained the various methods provided the learning materials before the classes on-hand.

• **Time Allotted for the Activity:** 20 Minutes

• **Details of the Implementation:**

- The time allotted for the topics is 15 Minutes.
- One student is randomly chosen for presenting the topic that has been shared earlier via LMS.
- S.Sakthi Sha has detailed about the various research tools and methods available for UX.
- After the explanation presenter asked questions to her peer students. Few of them replied and few students asked some doubts to the presenter.
- They all discussed about the topic and the presenter given a conclusion to the topic and finished the assigned task.
- Sakthi Sha completed the activity and the samples are shown in Figure 1a and 1b.

• **CO – PO / PSO mapping:**

CO	PO1	PO2	PO3	PO4	PO5	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO3	1	3	3	2	2	2	3	1	2	1	3	3

(1 – Low

2 – Moderate

3 – High)

PO/PSO Mapped:

Innovative Practice	PO1	PO2	PO3	PO4	PO5	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO3	1	3	3	2	2	2	3	1	2	1	3	3
Justification for Correlation	Students can be able to design based on user experience and could care about the constraints..	The students will be able to define the UX process and methodology in designing user needs and achieving their goals.	The students could select tools and methods for research on the situations or resources.	The students could design or develop a new application to meet the goals of the business needs for a respective user.	Students could identify situations to obtain the successful results using new technologies.	Students can be able to function effectively as an individual, and as a member or leader in diverse teams to implement design projects	Students can be able to communicate effectively on complex engineering activities with the engineering community	Students could manage the projects with the knowledge gained from the interface design concepts	Students will have the ability to engage in independent and life-long learning about the UI designing techniques	The basic understanding of the designing will enable the students to develop software to solve the complex computation tasks	Students could apply the knowledge of features supported by various UX design in developing reliable IT solutions.	Students can be able to apply appreciable knowledge of design and development practices to deliver a quality outcome in websites or applications.

Reflective Critique:

❖ ***Feedback of practice from students and other stakeholders:***

- Students become active participants in their learning rather than passive recipients of information.
- The teacher shifts from being the primary lecturer to acting as a guide and facilitator, providing individualized support and answering specific questions as students work on applying the concepts.

❖ ***Benefit of the practice:***

- In-class activities foster a rich environment for social and collaborative learning among students.
- Students can learn at their own pace with the pre-class materials, revisiting content as needed.
- Teachers can spend less time on lecturing and more time using their expertise to support students directly.

❖ ***Challenges faced in implementation:***

- Students, especially those accustomed to traditional lectures, may initially find the active role and independence required to be disorienting.
- It is really important that every student has equal access to technology and resources.
- Some students might find it difficult to practice self-directed learning.
