

Department of Information Technology
Academic Year 2025 - 2026 (Odd Semester)

Semester, Degree & Branch: V Semester, B.Tech. IT

Course Code & Title: CCS370 & UI and UX design

Name of the Faculty member (s): Mrs. G.Sivasathiya, AP/IT

Innovative Practice Description

- **Unit / Topic:** Unit II / UI Elements
- **Course Outcome:** CO2
- **Topic Learning Outcome:** TLO5
- **Activity Chosen:** Mind Map

- **Justification:**

UI (User Interface) elements are the visual building blocks of a digital interface, that allow users to interact with an application or website. They include components like buttons, menus, icons, input fields, and visual layouts that guide user actions, present information, and enhance overall user experience by creating a familiar and intuitive interaction. In Mind map activity students deployed their points in the format of different maps.

- **Time Allotted for the Activity:** 10 Minutes

- **Details of the Implementation:**

In the beginning of session, the instructor explained all the various types of UI elements clearly with a PowerPoint presentation. At the end of lecture, students were recalled with all the UI elements, its functionalities and iconographic representations. Finally, students were given with 10 minutes to draw the concept of UI elements that they learned in the session. All students have drawn different maps according to their understanding. Figure 1.a and Figure 1.b shows different Mind map presentation done by students. This activity demonstrated the involvement of students in the particular class.

- **CO – PO / PSO mapping:**

CO	PO1	PO2	PO3	PO4	PO5	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO2	2	3	1	3	2	1	2	2	2	1	2	2

(1 – Low

2 – Moderate

3 – High)

PO/PSO Mapped:

Innovative Practice	PO1	PO2	PO3	PO4	PO5	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO2	2	3	1	3	2	1	2	2	2	1	2	2
Justification for Correlation	Students could apply visual concepts to develop real-time applications.	Students will be able to analyze the performance of different UI elements and patterns	Students could acquire knowledge about interaction behaviors and various principles.	Students will be able to identify the suitable principle to apply design concepts and create a webpage or an application.	Students could apply recent tools to develop visual impacts for designing an application	Students can be able to function effectively as an individual, and as a member or leader in diverse teams to implement design projects	Students can be able to communicate effectively on complex engineering activities with the engineering community	Students could manage the projects with the knowledge gained from the interface design concepts	Students will have the ability to engage in independent and life-long learning about the UI designing techniques	The basic understanding of the designing will enable the students to develop software to solve the complex computation tasks	Students could apply the knowledge of features supported by various UI design in developing branding across the websites	Students can be able to apply appreciable knowledge of design and development practices to deliver a quality outcome in websites or applications.

Reflective Critique:

❖ *Feedback of practice from students and other stakeholders:*

- Some students found creating mind maps enjoyable and engaging, enhancing their motivation to learn.
- Students felt that mind maps encourage creative thinking and deeper understanding by linking related ideas visually.
- Students and other stakeholders appreciated the visual and organized nature of mind maps, which helped them connect concepts more clearly.

❖ *Benefit of the practice:*

- Helps students organize complex information in a structured and easily digestible format.
- Encourages active learning as students must analyze and categorize information rather than passively take notes.
- Enhances memory retention by leveraging visual elements like colors, images and spatial organization.

❖ *Challenges faced in implementation:*

- Some students initially struggled with the open-ended nature of mind mapping, requiring additional guidance and examples.
- Time constraints in class could limit how detailed the mind maps could be.
- Ensuring that mind maps stay focused and relevant can be difficult if students include too many unrelated ideas.
