

Department of Information Technology
Academic Year 2025 - 2026 (Odd Semester)

Semester, Degree & Branch: V Semester, B.Tech. IT

Course Code & Title: CCS370 & UI and UX design

Name of the Faculty member (s): Mrs. G.Sivasathiya, AP/IT

Innovative Practice Description

- **Unit / Topic:** Unit IV / Creating Wireflows
- **Course Outcome:** CO4
- **Topic Learning Outcome:** TLO13
- **Activity Chosen:** Project Based Learning

- **Justification:**

A wireflow in UI/UX is a visual representation that combines a wireframe (a low-fidelity sketch of an app or website screen) with a flowchart to illustrate a user's journey through a digital product. It provides clarity on the product's functionality and helps to identify potential user experience issues before development. Project-Based Learning (PBL) is a student-centered teaching method where students develop knowledge and skills by investigating and responding to real-world problems, challenges, or questions over an extended period.

- **Time Allotted for the Activity:** 15 Minutes

- **Details of the Implementation:**

A project-based learning is an instrumental approach allowing students to develop skills or knowledge by engaging in projects. Three topics have been shared to the students. Among the given , they have chosen the topic based on their interest. They develop their own wireflow model in the learned tools like Figma and Whimsical. This activity demonstrated the designing intelligence of students in the particular class. Figure 1 a and 1 b., shows the samples of the student's performance.

- **CO – PO / PSO mapping:**

CO	PO1	PO2	PO3	PO4	PO5	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO4	1	2	3	3	1	3	2	1	3	3	3	3

(1 – Low

2 – Moderate

3 – High)

• **PO / PSO mapped:**

Innovative Practice	PO1	PO2	PO3	PO4	PO5	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO4	1	2	3	3	1	3	2	1	3	3	3	3
Justification for Correlation	Students will be able to apply the sketching principles and red routes for designing a responsive page	Students will be able to create wire flows, build prototype and high fidelity mockups.	The students could select tools and methods for research on the situations or resources.	Students will be able to conduct usability tests and synthesize the test findings.	Students could identify situations of unethical conduct and propose ethical alternatives	Students can be able to function effectively as an individual, and as a member or leader in diverse teams to implement design projects	Students can gain knowledge in interface and present their documentation effectively.	Students could manage the projects by conducting testing and prototype iterations.	Students will have the ability to engage in independent and life-long learning about the various product developments.	The basic understanding of the designing will enable the students to develop software to solve the complex computation tasks.	Students could apply the knowledge of features supported by various testing and prototype in developing reliable design environment	Students can be able to apply appreciable knowledge of design and development practices to deliver a quality outcome in manipulating various responsive designs.

Figure 1b. Wireflow sample done by Sudhakar M for a shopping application

Reflective Critique:

❖ *Feedback of practice from students and other stakeholders:*

- The students felt that they could design for any kind of topics in the field of education as well as for commercial purposes.
- Students are given significant input into the project's direction, allowing them to explore topics that are personally relevant to them.
- Stake holders insist that this practice centers on complex, open-ended questions or real-world challenges that are meaningful to students.

❖ *Benefit of the practice:*

- Students were actively participated in this activity.
- Students achieve a deeper understanding of content by actively applying it to authentic situations.
- Successfully completing projects and solving real-world problems boosts students' self-confidence and sense of agency.

❖ *Challenges faced in implementation:*

- Some students are not able to complete the given task on time.
- Few students due to lack of interest, engaged less in project work. After giving continuous instructions , they have given their best based upon their interests.
