

RAMCO INSTITUTE OF TECHNOLOGY

Approved by AICTE, New Delhi & Affiliated to Anna University

NAAC Accredited with 'A+' Grade & An ISO 9001: 2015 Certified Institution

NBA Accredited UG Programs: CSE, EEE, ECE and MECH

Department of Information Technology Academic Year 2024 - 2025 (Odd Semester)

Semester, Degree & Branch: V Semester, B.Tech. IT

Course Code & Title: CCS370 & UI and UX design

Name of the Faculty member (s): Mrs. G.Sivasathiya, AP/IT

Innovative Practice Description

- **Unit / Topic:** Unit IV / High and low fidelity mockups
- **Course Outcome:** CO4
- **Activity Chosen:** Think-Pair-Share

- **Justification:**

Think-pair-share is a collaborative learning strategy where students work together to solve a problem or answer a question about an assigned reading. This strategy requires students to think individually about a topic or answer to a question and share ideas with classmates. High and low fidelity mockups have been given as discussion topic and the students discussed among themselves as a group and they shared with their fellow-mates.

- **Time Allotted for the Activity:** 15 Minutes

- **Details of the Implementation:**

High and low fidelity wireframes is the topic provided to students. They think about and gathered the contents. They paired with their classmates and check the correctness of their ideas. Finally, the contents were delivered to the whole class by one of the members in the group.

- **CO – PO / PSO mapping:**

CO	PO1	PO2	PO3	PO4	PO5	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO4	1	2	3	3	1	-	-	-	3	2	1	3

(1 – Low

2 – Moderate

3 – High)

PO/PSO Mapped:

Innovative Practice	PO1	PO2	PO3	PO4	PO5	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO4	1	2	3	3	1	-	-	-	3	2	1	3
Justification for Correlation	Students will be able to apply the sketching principles and red routes for designing a responsive page	Students will be able to create wire flows, build prototype and high fidelity mockups.	The students could select tools and methods for research on the situations or resources.	Students will be able to conduct usability tests and synthesize the test findings.	Students could identify situations of unethical conduct and propose ethical alternatives	Students can be able to function effectively as an individual, and as a member or leader in diverse teams to implement design projects	Students can gain knowledge in interface and present their documentation effectively.	Students could manage the projects by conducting testing and prototype iterations.	Students will have the ability to engage in independent and life-long learning about the various product developments.	The basic understanding of the designing will enable the students to develop software to solve the complex computation tasks.	Students could apply the knowledge of features supported by various testing and prototype in developing reliable design environment	Students can be able to apply appreciable knowledge of design and development practices to deliver a quality outcome in manipulating various responsive designs.

- **Images / Screenshot of the practice:**

Figure 1. Students discussing their topics by pairing with others.

Reflective Critique:

❖ ***Feedback of practice from students and other stakeholders:***

- Few students discussed in detail about the topic given and explained with too many examples.
- Few of them couldn't find the exact content of the chosen topic.

❖ ***Benefit of the practice:***

- Students were actively participated in this activity.
- It helps the students to share their ideas with their classmates.
- It improves the communication skills and build their confidence as well.
- It is the most instantaneously transformational structure that we can add to our classrooms.

❖ ***Challenges faced in implementation:***

- Students who couldn't find the contents were not able to present clearly.
- Participation of all students in this activity is a challenging factor. After final discussion they got clear understanding and gained an idea for better presentation.
