

Department of Information Technology
Academic Year 2025 - 2026 (Odd Semester)

Semester, Degree & Branch: V Semester, B.Tech. IT

Course Code & Title: CCS370 & UI and UX design

Name of the Faculty member (s): Mrs. G.Sivasathiya, AP/IT

Innovative Practice Description

- **Unit / Topic:** Unit V / Flow Diagrams and Flow Mappings
- **Course Outcome:** CO5
- **Activity Chosen:** Think-Pair-Share

- **Justification:**

Think-pair-share is a cooperative learning strategy where students work together to solve a problem or answer a question about an assigned reading. This process allows students to actively engage with content, articulate their thoughts, and learn from different perspectives in a supportive environment. Flow diagrams and Flow mappings have been given as discussion topic and the students discussed among themselves as a group and they shared with their peer students.

- **Time Allotted for the Activity:** 20 Minutes

- **Details of the Implementation:**

Flow diagrams and Flow mappings topic has been given to the students. All the students formed a group among themselves with 2 to 3 members. They think about the topic and discussed their ideas with the paired members. At last one team was prompt to present about the topic to the entire class. Entire summary was given by the instructor and the topic was concluded.

Fig.1 shows that students grouped among themselves and sharing their own views on the topic given. After a firm discussion, one of the students S.Sakthi Sha explained the concepts of flow drawing and flow mapping for her peer students.

- **CO – PO / PSO mapping:**

CO	PO1	PO2	PO3	PO4	PO5	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO5	1	2	3	2	1	2	1	1	1	3	2	2

(1 – Low

2 – Moderate

3 – High)

PO/PSO Mapped:

Innovative Practice	PO1	PO2	PO3	PO4	PO5	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO5	1	2	3	2	1	2	1	1	1	3	2	2
Justification for Correlation	Students could identify and apply the research methods for writing problem statements	Students will be able to generate their own personas and ideate the solutions.	The students could select tools and methods for research on the user stories and scenarios.	Students will be able to develop Information architecture and mappings with flow diagrams	Students could use different tools and methods to develop the architecture and flow diagrams.	Students could identify situations of unethical conduct and propose ethical alternatives.	Students can gain knowledge in interface and communicate with the end user for better solution.	Students could manage the projects by creating personas for end customer based on their needs.	Students will have the ability to engage in independent and life-long learning about the various product development ts.	The basic understanding of the designing will enable the students to develop software to solve the complex computation tasks.	Students could apply the knowledge of features supported by various testing and prototype in developing reliable design environment	Students can be able to apply appreciable knowledge of design and development practices to deliver a quality outcome in building architecture for the suitable Information provided.

Figure 2. S.Sakthi Sha explaining the concept discussed among their peers.

Reflective Critique:

❖ *Feedback of practice from students and other stakeholders:*

- Students often report feeling more confident to share their thoughts after discussing them with their team members.
- Stakeholders see Think-Pair-Share as a powerful strategy for encouraging students to think critically about a problem, analyze it, and develop well-reasoned solutions.

❖ *Benefit of the practice:*

- Every student got a chance to process and articulate their thoughts before having to speak in front of the entire class. It helps the students to share their ideas with their classmates.
- Students develop both their communication skills through discussion and their problem-solving skills by working through challenges with a partner.
- It is an active learning strategy that can break up lectures and re-engage learners.

❖ *Challenges faced in implementation:*

- Students did not understand the purpose of the activity or how to contribute effectively.
- Some students who are not talkative hesitate to share their ideas with the classmates. Participation of all students in this activity is a challenging factor.
- After final discussion they got clear understanding and gained an idea for better presentation.
