

Department of Information Technology
Academic Year 2024 - 2025 (Even Semester)

Degree, Semester & Branch: VI Semester B.Tech. IT

Course Code & Title: CCS336 & Cloud Service Management

Name of the Faculty member (s): Dr. K. Palraj, ASP/IT

Innovative Practice Description

- **Unit / Topic:** Unit I / Cloud Service Models
- **Course Outcome:** CO1
- **Unit Learning Outcome:** Pro1, 1e
- **Activity Chosen:** Mind map
- **Justification:**

In unit I, Mind mapping helps visualize cloud service models (IaaS, PaaS, SaaS) by breaking down key features, use cases, and relationships. It enhances understanding through a structured, hierarchical view, improving retention and recall. The visual format clarifies how these models interact, such as IaaS supporting PaaS and SaaS. It also allows for flexibility, making it easy to update with evolving cloud technologies. This makes mind mapping a powerful tool for learning and analyzing cloud services efficiently.

- **Time Allotted for the Activity:** 15 Minutes
- **Details of the Implementation:**
 - The time allotted for the topic is 15 Minutes.
 - The students were asked to draw central node, three main branches extend to represent Infrastructure as a Service (IaaS), Platform as a Service (PaaS), and Software as a Service (SaaS).
 - The students are enhancing clarity, visual elements can be incorporated to differentiate sections and illustrate relationships, such as how IaaS provides the foundational infrastructure for PaaS and SaaS.
 - The mind map can be continuously updated to incorporate evolving cloud trends, such as Hybrid Cloud and Serverless Computing, ensuring it remains a dynamic and effective tool for understanding cloud service models.
 - The students completed the activity, the sample of activity as shown in Figure 1 and 2.

• **CO – PO / PSO mapping:**

CO	PO1	PO2	PO3	PO4	PO5	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	2	2	2	3	2	2	3	2	2	2	3

(1 – Low 2 – Moderate 3 – High)

• **PO / PSO mapped:**

Innovative practice	PO1	PO2	PO3	PO4	PO5	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
	3	2	2	2	3	2		2	3	2	2	2	3
Justification for correlation	The students able to apply foundational knowledge of computing, IT, and cloud architecture to develop effective cloud strategies	The students able to analyze organizational needs and challenges to design tailored cloud strategies for optimal performance and scalability	The students able to design cloud strategies to meet organizational goals while considering factors like cost, security, and sustainability	The students able to use research-based approaches to evaluate cloud platforms and framework for solving complex business challenges	The students able to utilize advanced cloud management platforms to design, implement, and monitor strategic initiatives effectively	In practice, the students maintain ethical standards in cloud strategy	The students able to collaborate within multidisciplinary teams to define and execute cloud strategies effectively	The students able to communicate cloud strategy frameworks and implementation plans effectively to stakeholders and teams	The students able to oversee cloud projects, streamline costs, and align them with the organization's financial objectives	The student able to continuously refine cloud strategies to stay aligned with emerging technologies	The students able to apply mathematical models and computing techniques to develop cloud service strategies that optimize performance, cost, and scalability.	The students able to integrate emerging technologies like IoT, mobile apps, and data analytics into cloud strategies for enhanced service delivery and innovation	The students able to manage cloud service strategy projects effectively, aligning them with business goals and delivering reliable, high-value IT solutions

- **Reflective Critique:**

- ❖ ***Feedback of practice from students and other stakeholders:***

- Students who have practiced mind mapping for Cloud Service Models (IaaS, PaaS, SaaS) generally provide positive feedback, highlighting its effectiveness in enhancing understanding and retention.
 - The hierarchical structure of mind maps allows them to see the relationships between different cloud models, making it easier to differentiate IaaS, PaaS, and SaaS.
 - students appreciate the interactive and engaging nature of digital mind mapping
 - Students are remembering information better because of the visual format

- ❖ ***Benefit of the practice:***

- Visual representation helps break down complex cloud concepts into simpler, structured formats.
 - Interactive elements make learning more enjoyable and personalized.
 - The students are encouraged strategic thinking by visually mapping out marketing plans and campaigns
 - A well-structured mind map serves as an effective summary for exams and presentations

- ❖ ***Challenges faced in implementation:***

- Mind maps are useful for brainstorming but may not always be the best tool for making detailed cloud service decisions.
 - Some mind-mapping tools lack advanced features like real-time collaboration or integration with another platform.
 - Students may struggle with differences in how they structure and interpret mind maps.
