

**Department of Information Technology
Academic Year 2024 – 2025(Odd Semester)**

Degree, Semester & Branch: B.Tech-V & IT

Course Code & Title: CCS334 & Big Data Analytics

Name of the Faculty member (s): M.Rethinakumari

Innovative Practice Description

- **Unit / Topic: Unit I / Crowd Sourcing- Crowd Voting**
- **Course Outcome:** The student will be able to understand and generate their own crowd voting page for an application.
- **Activity Chosen: Student in Role**
- **Justification:**

Many application models were discussed in class with the help of PowerPoint to determine students' understanding of crowdsourcing. Then from the exam point of view, this type of application creation can be asked in the innovative part. So, this question is framed in the creative practice.

- **Time Allotted for the Activity:** 20 Minutes
- **Details of the Implementation:**
 - At the end of the unit, a particular topic was chosen for the innovative activity.
 - The voting for BDA was chosen as the topic posted on the board and an explanation of the problem statement was given to the students. (Fig 1)
 - As the first innovative practice for the subject, the topic above was chosen.
 - After assuring that all the members understood the problem statement, the given time of 15 minutes was started.
 - All the students were asked to form 10 questions through which their voting can assume the weightage of BDA. (Fig 2.1 & 2.2)
 - Then the peer groups were asked to vote the other question set.
 - So, over all feedback will be considered in the next unit level. (Fig 3)

• **CO – PO / PSO mapping:**

CO	PO1	PO2	PO3	PO5	PO11	PSO1	PSO2	PSO3
CO1	3	2	2	2	2	3	2	3

(1 – Low

2 – Moderate

3 – High)

• **PO / PSO mapped:**

Innovative practice	PO1	PO2	PO3	PO5	PO11	PSO1	PSO2	PSO3
Justification for correlation	The basic knowledge of engineering fundamentals is necessary to handle big data.	Big data analysis is important in analysis of complex engineering problems especially many business domains.	Various solutions could be designed by making decision based on the analysis of big data in business field	Choose appropriate big data tools and conduct analysis on complex problems based on the big data.	Able to analyze the huge amount of data and make business decisions and communicate with team members.	Able to analyze huge amount of data to solve complex computation task	Able to design and analyze the data to develop reliable IT solutions	Able to determine and apply appropriate techniques for providing solutions to real world problems in Industry and Research establishments.

• **Images / Screenshot of the practice:**

Fig 1: Problem Statement: Voting System for Big Data Analytics

Fig 2.1: Students creating 10 questions for the voting system

Fig 2.2: Students creating 10 questions for the voting system

Fig 3: Questions generated by Harikrishnan and Vijayalakshmi

• Reflective Critique:

❖ Feedback of practice from students and other stakeholders:

- Students participated more enthusiastically because their questions were voted by their peer group.
- Students understood the power of crowd voting to evaluate their individual opinion.
- This session made students to understand the how the voting makes the decision making easy

❖ ***Benefit of the practice:*** (E.g.: Outcome attainment would have increased due to innovative practice over conventional practice)

- Students felt confident about creating an application for a topic.
- Students started thinking about how to create a web page for this kind of application.

❖ ***Challenges faced in implementation:***

- *Some students went out of the box, their patterns were compared and discussed, and corrections were made.*
- *Voting was complicated as I had to make a copy of the questions.*
