Approved by AICTE, New Delhi & Affiliated to Anna University
Accredited by NAAC & An ISO 9001:2015 Certified Institution
NBA Accredited UG Programs: CSE, EEE, ECE and MECH

RAJAPALAYAM - 626 117
DEPARTMENT OF MECHANICAL ENGINEERING
Academic Year 2023 – 2024
Field visit report

(Source: <https://www.rajapalayammills.co.in/news/5s-day-celebration/>)

GE8077 & Total Quality Management

Faculty Handling Subject:

- 1. Dr.S.Rajakarunakaran, Professor& HoD/Mechanical**
- 2. Mr. G. Praburam, AP(Sr.Gr)/Mechanical**

Field Visit Coordinators:

- 1. Mr. G. Praburam, AP(Sr.Gr)/Mechanical**
- 2. Mr.U.Jansi Rajan, LT/Mechanical**

Date of Visit	Department	Venue
21.09.2023 (Thursday)	Computer Science Engineering	Rajapalayam Mill Ltd, Rajapalayam
23.09.2023 (Saturday)	Mechanical Engineering	Ramco Spintext, Rajapalayam

Faculty coordinator

HOD

Address of the Industry:

Rajapalayam Mills Premises, Post Box: 1,
P.A.C. Ramasamy Raja Salai,
Rajapalayam – 626 117.
Tamil Nadu, INDIA.

Scope of the Industry:

The story of the growth of Rajapalayam is the story of the man, Shri. P.A.C.Ramasamy Raja, born in 1894 to Shri Pusapati Chinniah Raja and Smt. Chittammal. In the village of Rajapalayam he sowed the seeds of South India's economic spring. He breathed life into the arid and indifferent land, tapped and developed the gold mine of opportunities. Under his care and guidance a sleepy village became a bustling town, a thriving municipality and finally a prosperous centre of commerce with a high literacy rate and growing employment opportunities.

His dreams for the future and his country became a reality in September 1938 as Rajapalayam Mills Ltd. Inaugurated by Shri V.V. Giri, the Honourable Labour Minister in the then Madras Presidency, it had 6800 spindles imported from England and was a major breakthrough in the industrial fortunes of Rajapalayam.

Visit outcome:

Students learned about the implementation of TQM Principles and Tools such as 5S, KAIZEN and Total Productive maintenance

Student's attendance:

Students of Final Year Computer Science Engineering, Mechanical Engineering and Third year Electronics and Communication Engineering who have opted Professional Elective GE8077 Total Quality Management went for Industrial Visit along with two faculty Member.

History of the company:

Birth of a Visionary: On April 24, 1894, when a son was born to Pusapati Chinniah Raja, there was great jubilation in the family. Chinniah Raja believed that the child was born with the blessings of the Lord of Rameswaram, and named him child Ramasamy Raja. Little did anyone imagine that the infant was to one day change the face of Rajapalayam, a town nesting on the foothills of the Western Ghats in South Tamil Nadu. Ramasamy Raja, known as PACR, was only 27 years old when his father died and all the onerous responsibilities of the family were thrust upon his young shoulders.

Businessman turned into Industrialist: Ramasamy Raja was looking for something more enterprising than the family business. He became an agent for Harvey Mills of Madurai. This move changed Ramasamy Raja's life. He realized the potential of his own land. Instead of sending the cotton to Madurai to be converted into yarn, he realized that he could do this in Rajapalayam itself. He concluded that Rajapalayam, which was otherwise a very backward area with very few job opportunities, would be vastly benefited by setting up a mill.

Selfless Service to People: He carried out his responsibilities very efficiently and the people of Rajapalayam respected him for his selfless service to the people. He was Chairman of Rajapalayam Municipality from 1941 to 1947. It was he who made Rajapalayam what it is today. Ramasamy Raja wanted to try his hand at business. He started off with a chain of provision shops and hardware shops. Along with his nephew, he started a transport corporation with five buses.

Birth of the first Ramco Venture: He visited Britain and other European countries to see first hand the working of the mills. There, he had the chance to meet many business magnates. He returned to India full of ideas. After returning to Rajapalayam, he put his plans into action. To start the yarn mill, he found that he needed Rs.5 lakhs, which in 1936 was a huge sum. It was considered a Herculean task to raise such a big capital. But the determined Raja was not deterred. He decided to make the people "Shareholders".

Rajapalayam Mills Ltd: Thanks to his illustrious background and his own reputation, he raised the required capital ready, in no time. On September 05, 1938, the then State Minister for Labour, V.V.Giri, inaugurated the mill and Rajapalayam Mills Ltd commenced operations. There was no looking back for Ramasamy Raja after this. The Mill was a grand success. He followed this up with other successful ventures. He started The Ramaraju Surgical Cotton Mills Ltd along with his son-in-law Rama Raju.

Agenda:

- Class room training on 5S, TPM and KAIZEN along with Industrial Safety
- Field visit inside factory to know the implementation of 5S, TPM & KAIZEN

1. Class room training on 5S, TPM and KAIZEN along with Industrial Safety

Initially the visit started with a session on safety precaution to be followed inside the company premises. Then continued in explaining the objective of 5S, TPM and KAIZEN.

Followed with the detailed basics and implementation of 5S in detailed manner was explained.

Then they briefed about the basics of Total Productive Maintenance (TPM) and Implementation of the same. He also added with a case study how implementation of TPM helped in improving the productivity by increasing the overall Equipment Effectiveness (OEE) of a machine. He also added about the abnormalities given by the employees and solution to the same provided by the employees. This shows the implementation of KAIZEN which is a Continuous Improvement Process.

2. Field visit inside factory to know the implementation of 5S, TPM & KAIZEN

After completing the in-house training followed by a small break, the students along with faculty members visited the implementation of 5S, KAIZEN and TPM in the spinning mill premises. They explained the importance of 5S application in store where 5S was implemented. Then a model machine, where TPM is implemented is explained with various CLIT [Cleaning, Lubricating, Inspection Tightening] operations. Finally students clarified all their doubts in implementation of 5S, KAIZEN and TPM.

Conclusion:

Field study collects original or unconventional data via face-to-face interviews, surveys, or direct observation. This technique is usually treated as an initial form of learning because the data collected is specific only to the purpose for which it was gathered. Likewise a field study was arranged for the final year Computer science Engineering and Mechanical engineering students for direct observation and collect information about implementation of various TQM Principles, TQM Tools and Techniques and ISO Management Systems. The students directly observed the implementation of continuous process improvement tools & Techniques such as 5S, Kaizen and TPM.

Expected Outcome:

- ✓ The traditional tools used in industries may be utilized in the projects of the students.
- ✓ These continuous process improvement techniques are lifelong learning techniques, where the students can implement the same in their day to day improvements.
