

Department of Mechanical Engineering

Academic Year: 2025 - 26 (Odd Semester)

Alumni Interaction Report

Event Title: Product Design and Innovation Pathways for Mechanical Engineers

Date of the Event: 03/10/2025

Time: 01:30 PM

Venue: Mechatronics Lab

Number of Participants: 48

Program Details:

Nature of session	Purpose of Interaction	Target Audience	POs relevance
Alumni – Career Awareness meet (AM/25-26/06)	- To create awareness about career opportunities in Product Design and CAD Engineering - To guide students in design software tools and industry workflows. - To share insights about career growth, certifications, and research involvement. - To motivate students to focus on innovation and technical skills required for modern design roles.	Final year Mechanical Students	PO1, PO3, PO5, PO7

Glimpse of the meet:

Speakers Details	
Name of the Alumnus	Mr.R.Senthursanjay
Date and Time	03/10/2025 01.30 PM
Meeting Platform	Mechatronics Lab
Target Audience	Final Year Mechanical Students
Nature of Interaction	1. The session was a career awareness and technical interaction where the alumnus shared real-time industrial practices and career pathways in product design and CAD engineering. 2. It was an interactive guidance session emphasizing software skill development, design process understanding, and innovation-oriented learning for final-year mechanical students..
Present Position	Mr.R.Senthursanjay (2020-2024 Batch) Product Design Engineer, Bray Controls, Chennai

Key Highlights of the Session

1. Career in Product Design and Engineering Tools

- Mr. Senthursanjay R, Product Design Engineer at Bray Controls, shared his journey from a student to an industry professional.
- He highlighted the importance of mastering SolidWorks, Creo, and Autodesk Inventor, and understanding FEA using ANSYS and Hypermesh.
- He explained how mechanical engineers can transition into design, simulation, and R&D roles through practical exposure and consistent learning.

2. Design Process and Industry Readiness

- He discussed real-world design workflows, including concept modeling, 3D to 2D drafting, FEA validation, and manufacturability checks.
- He also explained how automation using VBA and SolidWorks API helps engineers improve efficiency and reduce repetitive tasks in the design process.
- Students were advised to gain hands-on practice and maintain portfolio-based project records.

3. Job Recruitment and Skill Preparation

- Mr. Senthursanjay provided insights into recruitment trends for product design engineers in service and core sectors.
- He recommended that students:
 - Build a strong foundation in engineering graphics and design fundamentals.
 - Obtain certifications from platforms like NPTEL, Udemy, and Altair Hypermesh courses.
 - Work on internships or small-scale projects to showcase design capabilities.
 - Focus on communication and teamwork for collaborative design environments.

4. Research and Innovative Thinking

- He presented his two academic projects:
 - Vortex Bladeless Wind Turbine with Piezoelectric Conversion
 - Effect of Zirconium & Tungsten Disulfide on Tensile Strength of Aluminum Composite
- He encouraged students to publish research papers, emphasizing how experimental and simulation-based projects can lead to innovation and patent opportunities.

Message to Juniors

“A designer is not just someone who creates models but someone who solves problems efficiently. Learn tools deeply, understand the physics behind your design, and always aim to make your work impactful and efficient.”

Feedback from Participants

- Students appreciated Mr. Senthursanjay's practical explanation of product design workflows and how automation can improve productivity.
- His session was inspiring for students aiming to work in CAD, FEA, and product development roles. The emphasis on certifications and research motivated students to enhance both their technical and analytical skills.
