

RAMCO INSTITUTE OF TECHNOLOGY

Department of Mechanical Engineering

Academic Year 2019 – 2020 (Odd Semester)

Innovative practice(s) description

Course code and Title: ME6005 Process Planning and Cost Estimation

Name of the Instructor(s): Mr.C.Gururaj, AP(SG)/Mech , Mr.R.Venkatesh, AP/Mech,

Date & Time: 05.08.2019 & 11:45PM to 12:35PM

Field Survey on Process Planning Procedure

Process Planning is the systematic way to execute the engineering processes to manufacture a product competitively and economically. It is also link between Engineering Design and Shop floor Manufacturing. The various process planning activities are:

- Drawing Interpretation
- Material Evaluation and Process Selection
- Selection of Machines, Tooling and Work holding Devices
- Setting Process Parameters
- Selection of Quality Assurance Methods
- Cost Estimating
- Preparing the Process Planning Documentation
- Communicating the Manufacturing Knowledge to the Shop floor

Initially we taught various process planning activities in the class room. Students were divided into groups and each group was asked to survey about the process planning activities followed by various industries and to present the data they collected. One team presented after collecting the data from the saree making company. From the field survey technique the students have understood the various process planning activities and they acquire knowledge in the field of process planning through the real time example.

This activity helps in attaining the following CO – PO mapping:

Course Outcome / Programme Outcome	PO1	PO3	PO9	PO10	PO11	PO12
CO1: Recall the steps involved in process planning.	2	1	2	2	2	1
CO2: Summarize the procedure and parameters required for process planning activities	2	1	2	2	2	1
