INTRODUCTION

- Convolutional neural networks (CNNs) have been widely used in recent research works for deep face recognition. In this work, the Convolutional neural networks will be used for the controlling of the doors using deep face recognition techniques. A security system for use on doors which have an electrically operated door locking mechanism is disclosed, This system is completely done by using the face recognition techniques. The Artificial Intelligence and the Deep Learning models and techniques were used to do this work. The visual input is given to the system, which converts the input to the signals and identified the person who arrived.
