

RAMCO INSTITUTE OF TECHNOLOGY
Department of Electrical and Electronics Engineering
Academic Year: 2017- 2018 (Even Semester)

Innovative Practices Description

UNIT II (ELECTRICAL AND ELECTRONICS INSTRUMENTS)

Degree, Semester & Branch: IV Semester B.E. EEE

Course Code & Title: EE6404 Measurements and Instrumentation

Name of the Faculty member: S. Viignesh

Name of the Topic: Single phase energy meter

Name of the Innovative Practice: Demonstration of Single phase energy meter

Date & Duration: 19.1.18 & 40 Minutes

ICT Tool Used: Experimental Setup

Description:

- ❖ A practical demonstration session was conducted for students of IV Semester EEE students on the topic titled, “Single Phase Energy meter”. The Students were explained about the construction, working principle of single phase energy meter.

Goals (Learning Outcomes):

- ❖ The students will be able to explain the construction and operation of single phase energy meter.

Use of appropriate methods:

Justification for choosing the topic:

- ❖ The topic single phase energy meter is explained by demonstrating the working model to the students. After explaining the working model, the students can able to explain the construction and working principle of single phase energy meter.

Effective presentation

Details of the Implementation:

- ❖ After teaching the energy meter, the three students were made their presentation about the topic for better understanding and clarity.
- ❖ Total Strength is 56.

A view of implementation of the Activity while the students are listening.

Significance of Results:

Assessment of Effectiveness/Success of the Activity:

- ✓ While conducting the activity, I understood that the students can able to explain the working principle of single phase energy meter without any confusion.
- ✓ The success of the activity was evaluated by asking the same question in Internal Assessment test I – Around 60% of students answered correctly.

Reflective Critique:

1. Pre-implementation Reflection :

• Benefits:

- ✓ Students can able to understand the principle of operation by experimentally verifying with the theoretical concepts. Also they can able to write the answer in exam without any confusion.

• Challenges:

- ✓ Duration of activity conducted is more.

2. Post-implementation Reflection :

• Benefits:

- ✓ Students understood the concept which was reflected from their answers for the questions I have asked during experimental demonstration.

• Challenges:

- ✓ Explanation given by students took more time.
